Dear John,

Are you still using a time-consuming paper-based order fulfillment system? Do you dream of significantly lowering your distribution costs and improving customer satisfaction with a cost-effective, automated system designed for smaller warehouses?

You may be familiar with Avery & Associates' warehouse consulting services. Now we'd like to introduce you to our **"No-More-Errors" (NME) Batch Picking System.**

While other picking systems, such as 'pick-to-light,' emphasize speed, the NME Batch Picking System delivers speed and 100% accuracy. With the NME system, your pickers can fulfill up to 16 batch orders on a single trip through the warehouse – guaranteed error-free!

Not possible? See for yourself how NME can help you achieve 100% accuracy simply and easily by ordering your **FREE CD, "No-More-Errors' Multiple Order Picking System."** **Simply use the reply form below.**

In this full-color, high-quality video, you'll see how the NME system requires little effort or double-checking on the part of the picker. Because it's based on barcode technology, the NME system verifies each part of the picking transaction – from slot number and product ID code to quantity picked and shipping carton. In fact, the NME system makes it virtually impossible for pickers to make a mistake.

Request your FREE CD today and learn how the NME system can help you achieve the following:

- **Decreased labor costs** – You'll no longer need order checkers to double-check accuracy.
- **Improved customer satisfaction** – Customers receive correct orders, file fewer complaints.
- **Faster time to ship** – The NME system speeds up pick times, eliminates backups.
- **100% order fulfillment accuracy** – Or your money back.

Sincerely,

Art Avery
